The Unic range of Spray Gun cleaning Machines have been designed to give operators a choice of facilities, whilst ensuring basic quality features are consistent throughout the range. The robust construction, featuring air extraction, stainless steel wash tanks and brass distribution bars, makes the unit suitable for **both solvent and water based cleaning agents**. A powerful air operated, self reciprocating pump delivers up to 12 ltrs /min with an air input pressure of 75-100 psi and consumes approx 4/7 cfm. This ensures a high volume of solvent is delivered through the spray jet nozzles and optimises the cleaning performance.

This machine has additional features to help clean the spray guns and is suitable for one and two painter bodyshops.

The jets have been carefully positioned to give maximum cleaning efficiency in both automatic and manual wash mode. From the basic unit to the top of the range, quality components have been used to give professional painters the operational choices that enable them to clean their spray guns efficiently. **This in turn ensures quality work to be produced every time!** By utilising standard solvent drums as the reservoir, handling of contaminated waste is made easy and ensures maximum safety to the operator. **The top of the range machine gives large, busy bodyshops total flexibility and efficiency. Can be used in a variety of ways, either solvent, dirty and clean washes or water based dirty and clean washes. Suitable for bodyshops with 4-6 painters**
